

Java

```
class Solution {  
    public int[] canSeePersonsCount(int[] heights) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} heights  
 * @return {number[]}  
 */  
var canSeePersonsCount = function(heights) {  
  
};
```

TypeScript

```
function canSeePersonsCount(heights: number[]): number[] {  
  
};
```

C++

```
class Solution {  
public:
```

```
vector<int> canSeePersonsCount(vector<int>& heights) {  
  
}  
};
```

C#

```
public class Solution {  
    public int[] CanSeePersonsCount(int[] heights) {  
  
    }  
}
```

Kotlin

```
class Solution {  
    fun canSeePersonsCount(heights: IntArray): IntArray {  
  
    }  
}
```

Go

```
func canSeePersonsCount(heights []int) []int {  
  
}
```
